Add a hanging indent in Pages for iOS

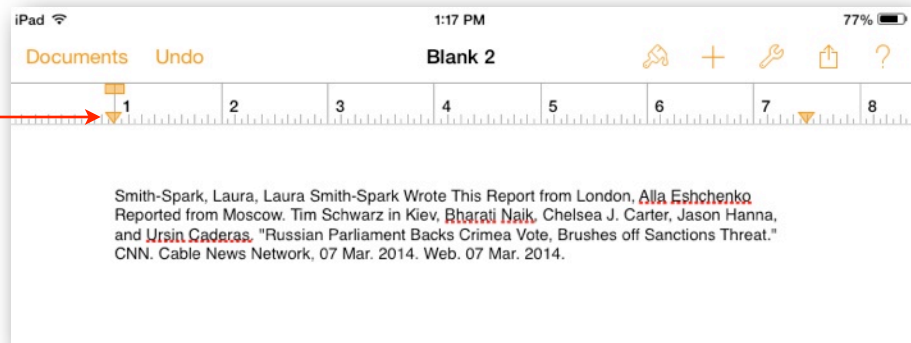

A hanging indent is an indent that indents all text except the first line. You will commonly use this on works cited or bibliography pages. Here's how to do it in Pages for iOS:

Open Pages

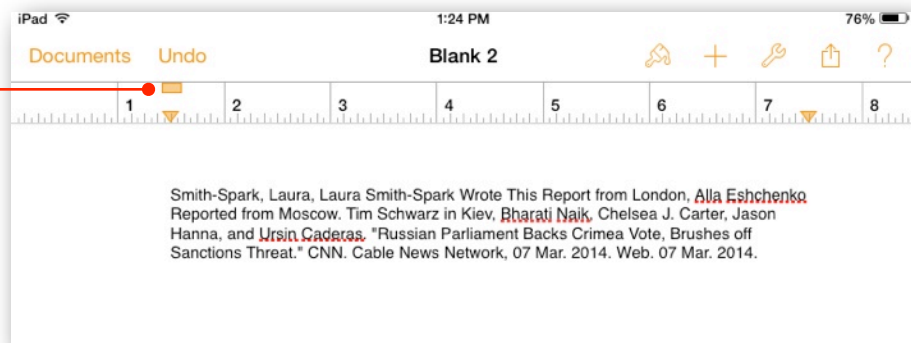

Highlight the text that you want to indent
(I'm indenting all of my text in this example)

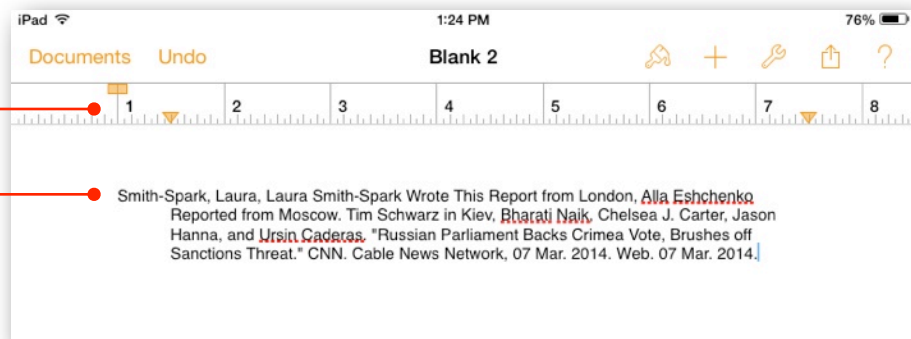

Grab the upside down triangle and drag it to the right

Now grab the rectangle and drag it to the left.

It should look like this

Notice how your text is now indented.
